INSTALLATION GUIDE

PRIOR TO INSTALLATION OF THE MATERIAL PLEASE GO THROUGH THIS GUIDE CAREFULLY

- Do not install the ventilo blocks on the smooth and fragile bases such as flimsy surfaces or dust covered, ceramic, mosaic, tiles etc.
- Do not install the product if it is not in compliance with the specifications. Contact your supplier as soon as possible, producing the relevant purchasing invoice.
- During installation in extreme climates, we suggest to use adhesives as per the specifications.
- Watering the blocks before installation is important.
- Watering the finished wall after installation for 5 consecutive days (4 times a day).
- These steps are very important which effects directly to the wall quality later.

INSTALLATION PROCEDURE

- Measure the height and width of the estimated wall.
- Wall should be reinforced vertically and horizontally with iron rebar between the gap of two blocks, If the wall is over 2.5 meter height, and over 4 meter width, it should be locked by the 3-5 cm concrete beam.
- First clean the surface from dust and dirt, for good accretion of the mortar. Level out the base where first line of Ventilo blocks will be installed.
- Use hand gloves, if blocks are white or bright in color, to prevent dirt or stain on block.
- Clean the blocks using a dry plastic brush.
- While preparing mortar, consider the right amount of water, for good accretion and the right consistency of mortar.
- For adding space between the joint use spacer of desirable width, usually between 5-10 mm.
- Apply the 10mm mortar layer on each top and side faces of the block and lay it into the correct position. Remove excess mortar using a trowel.
- Start the first block laying from the bottom corner.
- Place the block by pressing hard to ensure a very good adherence of the mortar on the side surface of the block.
- Use a rubber mallet(rubber hammer) to properly fix and level the block, in order not to wound the block.
- Use the normal tile cutting machine, if needed.
- If mortars gets on the surface of the blocks, before it hardens (after 0.5 or 1 hour) brush off the mortar with a soft wired brushed or hard plastic, do not use metal.
- Apply protective / colour enhancer coat to blocks. (Water based acrylic paintcould be used to color the blocks)
